

Assembly Instructions

Extra Large Log Store + Doors

The most important thing when assembling the house is that the ground on which the unit is to stand **must be level**. If the ground is not level the unit will not be square and the unit cannot be correctly assembled.

1/ Place floor on level surface and then place the bottom back panel on the floor making sure that the bottom lip is tight up to the floor and flush on both sides then screw through the panel into the floor as shown Picture 1.

2/ Take the side panel and match it up to the back panel and the floor and screw through the side panel into the back panel and also screw through the bottom of the side panel into the floor as shown in Picture 2& 3. Repeat this procedure with the opposite side panel. **Please Note the rear panels are marked Top and Bottom**

3/ Take the top back panel and place on top of the bottom panel and screw through the bottom rail into the top rail of the bottom back panel as pictures 4 & 5.

4/ Then screw through the side panel into the top rear panel on both sides as shown in picture 6.

5/ The center support can now be placed into position and screwed firstly to the floor and then to the Center upright on the rear panel as shown in pictures 7 & 8.

6/ The door panel and frame can now be fitted into place and screwed firstly to the side panel making sure that the frame is flush with the front of the side panel frame and then to the centre support making sure that it is once again flush with the frame. Once screwed top and bottom on both sides the door can be shut and proceed with the other door in the same manner. As Shown In pictures 9 & 10

7/ Place the roof over the unit making sure sits flat on top of the unit as shown in Picture 11. Now screw the screws through the roof frame into the sides as shown in picture 12. Repeat this on the opposite side.

8/ Your unit should now be fully assembled and give you many trouble free years of use.
